

Support Rollers

The Westlon Support Rollers come fully assembled and are suitable for heavy loads in all steel and non-ferrous rolling mills. Typical areas of use include ground and swing rollers for strip mills, and entry or exit rollers for pickling lines.

Westlon materials are specially engineered to optimise hardness and resilience compared to polyurethane or rubber, giving the most cost effective solution to roll coverings.

Capable of manufacturing Support Rollers with diameters from 80mm - 500mm and up to 2500mm in length, Westley Plastics Support Rollers can be expected to have the longest possible service life, often lasting for many years.

This is a well established product line with many satisfied customers worldwide taking advantage of the durability and ease of fitment of these rollers.

Key Benefits

- Lighter than steel
- Smooth running with a low starting torque
- Quieter than steel rollers
- Resistant to shock loads
- Maintenance free
- Superior wear resistance
- Can be fitted by hand
