

Thrust Collars

Designed to reduce the wear from steel on steel applications, Westley Plastics Thrust Collars are supplied throughout the world, and are used in steel and non-ferrous rolling mills, such as hot strip mills, cold strip mills, wire and section mills.

They have been shown to improve productivity, whilst cutting costs and helping to reduce accidents. Being lightweight ensures they are easy to fit, requiring no specialist tools for installation.

Westley Plastics Thrust Collars are manufactured using the latest polymer technology and are available in a range of sizes and configurations to suit all applications.

Key Benefits

- Reduced wear by eliminating steel on steel applications
- Improved productivity due to reduced downtime
- Lighter than traditional materials, making them safer to fit
- Long life expectancy
- No specialist tools required for installation
